[Offline - Leave a message](#)

Methods

An API method is an operation that you can perform on some objects using HTTP requests. An object can be for example a Product, Page, Employee, etc, and the action Get Products, Delete Pages and so on. The actions are defined through HTTP Methods. The convention for REST APIs is to use GET for retrieving objects, POST for creating objects, PUT for updating objects and DELETE for removing objects.

What is therapy and counselling?

Therapy offers you a safe, confidential place to talk about your life and anything that may be confusing, painful or uncomfortable. It allows you to talk with someone who is trained to listen attentively and to help you improve things.

How will therapy make me feel?

Therapy is a very personal process. Sometimes it is necessary to talk about painful feelings or difficult decisions, so you may go through a period of feeling worse than when you started. However, therapy should enable you to feel better in the long-run.

If you do experience a period of feeling worse, talk to your therapist about it to ensure you get the best out of your therapy.

Therapy offers you a safe, confidential place to talk about your life and anything that may be confusing, painful or uncomfortable. It allows you to talk with someone who is trained to listen attentively and to help you improve things.

Therapy is a very personal process. Sometimes it is necessary to talk about painful feelings or difficult decisions, so you may go through a period of feeling worse than when you started.

However, therapy should enable you to feel better in the long-run.

Talking therapies, such as counselling, can be used to treat many different health conditions including:

- depression
- anxiety
- borderline personality disorder (BPD)
- obsessive compulsive disorder (OCD)
- post-traumatic stress disorder (PTSD)
- long-term illnesses
- eating disorders, such as anorexia nervosa and bulimia
- drug misuse

Depressions Dangerous Secret

Depressions Dangerous Secret

A new study which is the first of its kind has been published this week, which looked at the state of Mental Health among airline pilots, the study was carried out by Harvard's Public Health School after Andreas Lubitz steering of the Germanwings flight into the French Alps.

The results of the study found that one in seven pilots suffer depression, with pilots aged in their forties being at most risk. This means that a worrying 14% of pilots reach the threshold of for clinical depression.
